

Novator Pitch

Abhay Gupta, Rishi Shah, Bruno Chong, Casper Liao

Novator is a crypto-exchange platform to improve security, efficiency and cost.

Problem to Solve

How can we make cryptocurrency conversion transactions more time and economically-efficient, thereby enhancing accessibility and demand for such currencies?

Opportunity

Provide user with a platform that offers higher security, efficiency and allow transaction with lower fees.

Solution

Leverage XRPL's EVM sidechain to construct a decentralized, high frequency, multi-crypto exchange environment, accessible through a mobile application.

EVM Sidechain & XRP Ledger

Scalability & Performance

1000
transactions per
sec / 5 sec per
block

Fraction of a
cent--- low
transaction fee

Interoperability

Seamless cross
chain connection

Interledger
conversion
bridge

Customization

Full
programmability
/ customizable
chain parameters

Smart contract
compatibility

Implementation Solution

Competitor Analysis

What's Wrong with These?

Sushiswap

- Riddled with bug errors and complicated UX
- Limits access to Ethereum blockchain cryptocurrencies
- Dated version of Uniswap Protocol

Pancakeswap

- No mobile application
- Proof of Staking Authority increases costs and block times
- Non custodial and no central authority

Coinbase

- Layer 2 blockchain implementation
- No use of smart contracts, entirely offchain transaction
- No support for native bitcoin

XRPL DEX

- Cannot place restrictions on market orders, stop orders, or trading on leverage
- No use of smart contracts
- Slow transaction time (3-5 seconds)

Our Unique Value Propositions

Security & Accountability

- Proof of authority
- Asset securitization: application places restrictions on transactions to maintain risk pool ratio
- Use of smart contract

Time & Economic Efficiency

- EVM Sidechain enhances speed of transaction (1 second)
- Reduces liquidity risk by enhancing time efficiency
- Does not require multiple bridge conversions
- Low gas free

Ease of Use

- Users can convert any cryptocurrency with the click of a button
- Versatile risk pool allows for effortless dispensing of various different cryptocurrencies

Existing Market

580 Million Global
Users

Cryptocurrencies

Revenue Streams – Collecting from Traders

Conversion Fees

- Charge a maximum of 0.25% conversion fee, keeping in line with competition
- Possible to reduce conversion fees later on and still maintain revenue due to economic efficiency of EVM sidechain

In-App Advertisements

- Providing advertisements at every set interval of time for users to view
- Allowing users to publish their own advertisement for fees

Subscription Fee (later stages)

- Network effects: as more users use the application, other target audience members will also be drawn in
- Operate on a freemium model

Future Plans
